

Details of Rear Closer Super Slider

THE CLOSER

*Patent Pending

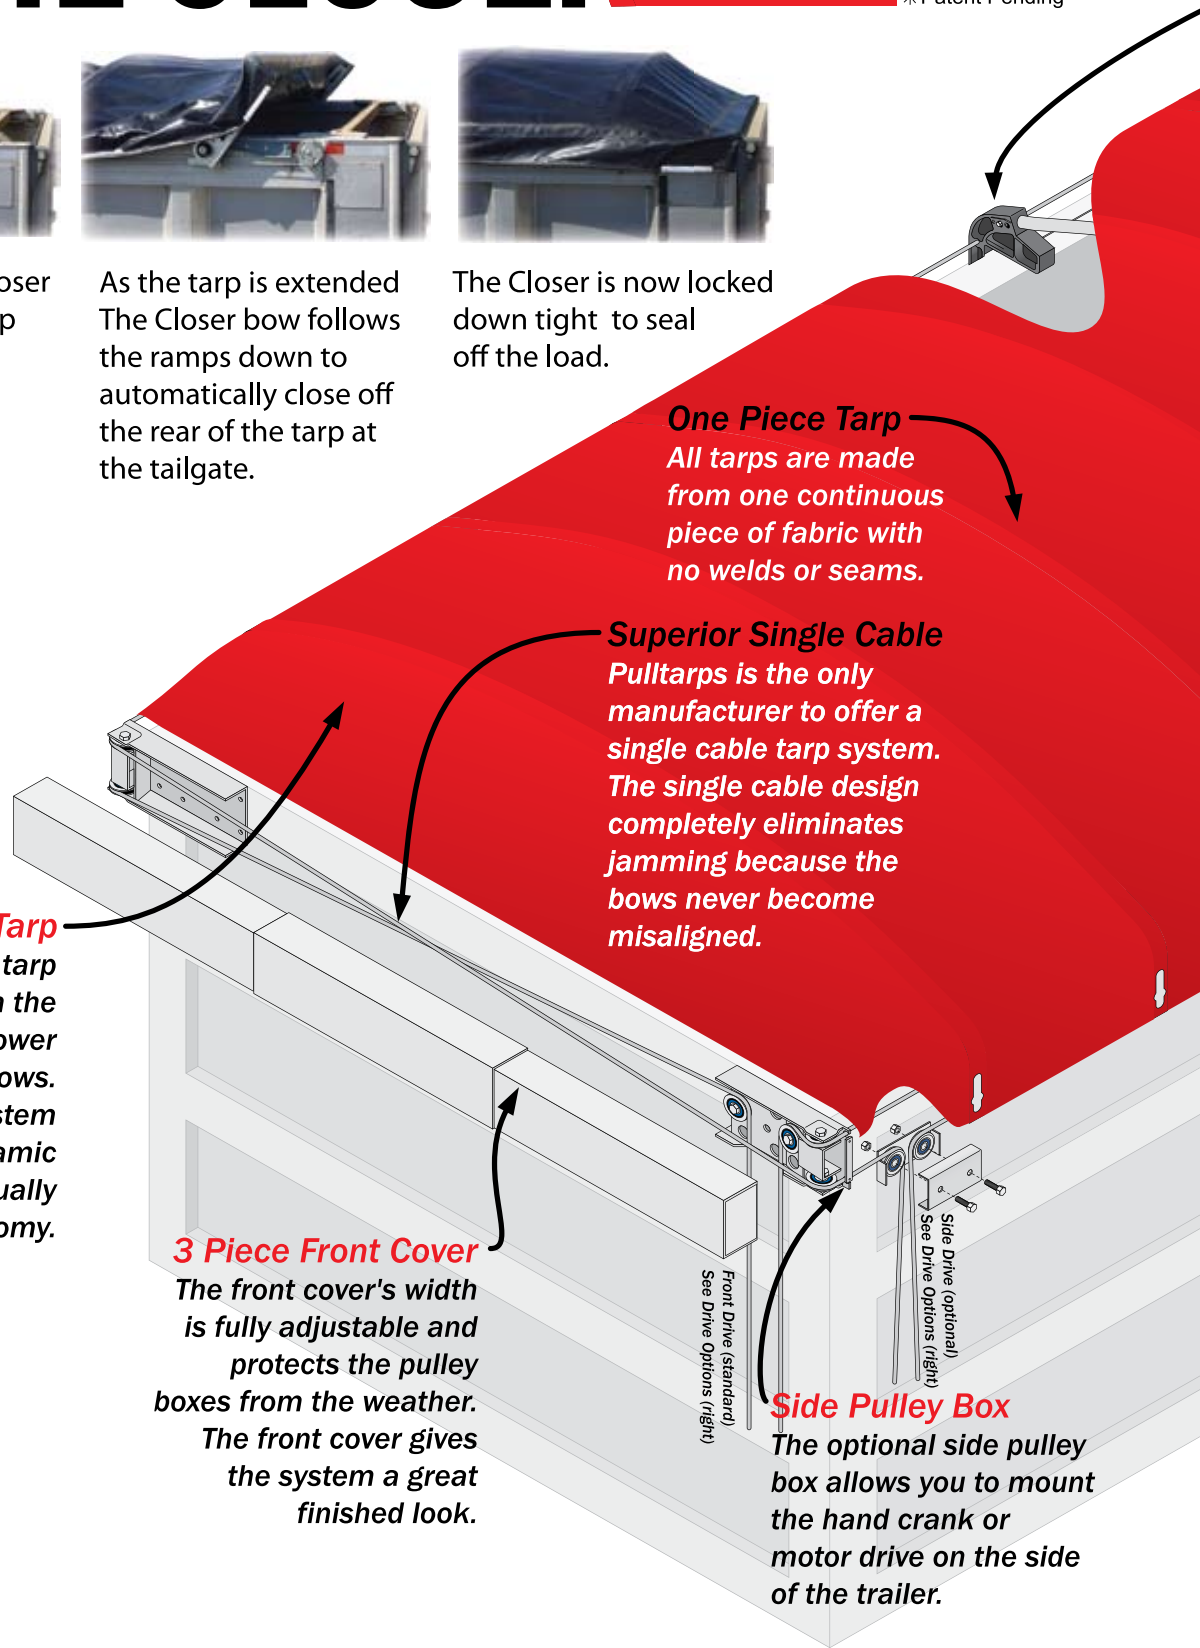

The spring loaded Closer bow holds the tarp up above the load.

As the tarp is extended The Closer bow follows the ramps down to automatically close off the rear of the tarp at the tailgate.

The Closer is now locked down tight to seal off the load.

One Piece Tarp
All tarps are made from one continuous piece of fabric with no welds or seams.

Superior Single Cable
Pulltarps is the only manufacturer to offer a single cable tarp system. The single cable design completely eliminates jamming because the bows never become misaligned.

Aerodynamic Tarp
The front of the tarp can be tapered with the front bow height lower than the other bows. This makes the system more aerodynamic and can actually improve fuel economy.

3 Piece Front Cover
The front cover's width is fully adjustable and protects the pulley boxes from the weather. The front cover gives the system a great finished look.

Front Drive (standard)
See Drive Options (right)

Side Pulley Box
The optional side pulley box allows you to mount the hand crank or motor drive on the side of the trailer.

Side Drive (optional)
See Drive Options (right)
