

Details Make the Difference

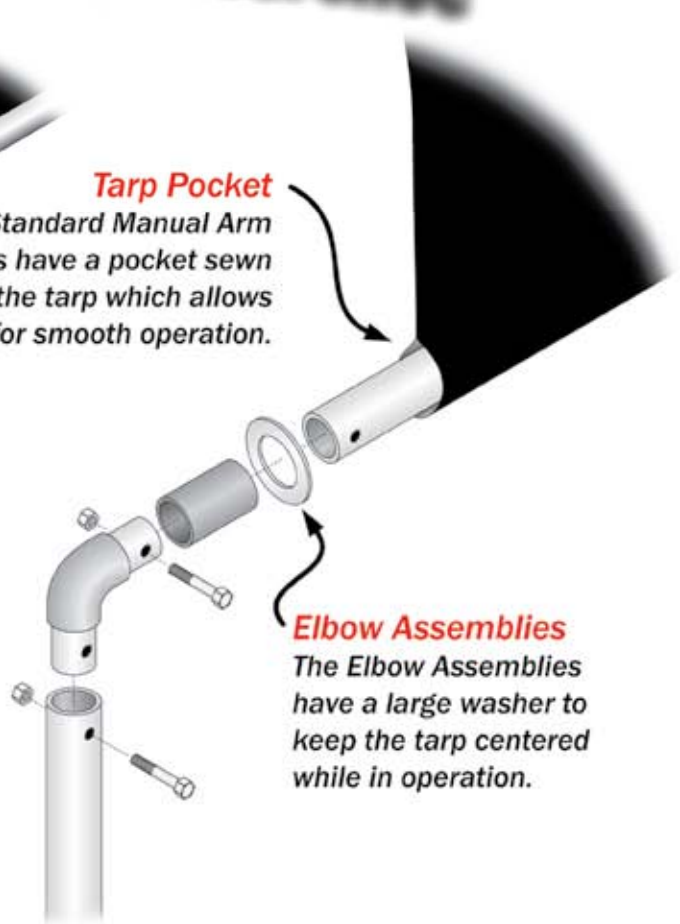

Retrofit Kit Elbows

Upgrade your existing Pulltarp System to Manual Arm System without having to remove the tarp.

Tarp Pocket

Standard Manual Arm Kits have a pocket sewn in the tarp which allows for smooth operation.

Elbow Assemblies

The Elbow Assemblies have a large washer to keep the tarp centered while in operation.

Side Flaps

Vinyl Side Flaps are available for all tarps. See page #45.

Braided Loop

The hand braided rope goes around the pullrod through a cutout in the pocket. This keeps the rope centered so the arms deploy evenly.

Rope Storage Hooks

The hooks are provided for front and rear rope storage. Zinc plated steel or aluminum.

Bungee Cord

The orange and black polypropylene truckers' rope has a bungee cord with a ring attached so it doesn't need to be tied off.
