

Details of Single Cable Super Slider

UHMW Sliders

The UHMW Sliders wipe the top rail clean with every cycle. The smooth square base reduces friction and makes cranking easier. Guaranteed to never wear out.

Aerodynamic Tarp

The front of the tarp can be tapered with the front bow height lower than the other bows. This makes the system more aerodynamic and can actually improve fuel economy.

One Piece Tarp

All tarps are made from one continuous piece of fabric with no welds or seams.

Superior Single Cable

Pulltarps is the only manufacturer to offer a single cable tarp system. The single cable design completely eliminates jamming because the bows never become misaligned.

3 Piece Front Cover

The front cover's width is fully adjustable and protects the pulley boxes from the weather. The front cover gives the system a great finished look.

Side Pulley Box

The optional side pulley box allows you to mount the hand crank or motor drive on the side of the trailer.
