HEADLINE: PULLTARPS MFG. introduces the **Automatic Rear Closer** for **Super Slider** cable systems.

The **Automatic Rear Closer** for **Super Slider** cable systems is the newest innovation for tarping trucks and trailers. It makes all other cable type tarping systems obsolete. This exclusive **Pulltarps'** innovation for truck tarps, automatically closes to seal off the load at the tailgate. This is a big advantage over other cable tarp systems that rely on a rear flap to contain the load. The **Automatic Rear Closer** eliminates the rear flap and the need to climb up on the tailgate to fasten it down.

- Safer
- Saves time
- Seals better
- Automatically Closes
- No more climbing on the trailer
- More aerodynamic for better fuel mileage

The **Automatic Rear Closer** holds the tarp up above the load, then closes automatically as the tarp reaches the tailgate. The **Closer** arms pull the tarp down tight at the tailgate to seal off the load.

The **Automatic Rear Closer** can be ordered as an option on all **Super Slider** cable systems.
