# Pulltarps 9” Open Arm System with Single Spring Pivots (Part number 201-0215 & 501-0784)

9/13/12

OPERATING DESIGN: Tarpaulin shall deploy by means of an electrically driven roller spool using spring loaded pivots connected to arms attached to the side of the dump body. Complete tarping function to be performed from ground level or truck cab. Tarp system shall come with all required mounting hardware, electric wire, switch, and breakers. Nuts, bolts, brackets, hardware, and arm pivots shall be zinc plated to prevent rust.

- A. TARPAULIN ROLLER SPOOL: Tarp spool shall consist of the following:
  - A.1 Tarp spool shall be driven by means of a direct gear drive motor
    - A.1.1 Motor to be 12 or 24 volt as required and produce 1.1 hp. minimum.
    - A.1.2 Motor to be lubricated and sealed from the factory.
    - A.1.3 Motor controlled by sealed reversing solenoid with remote low voltage rocker switch. Switch panel, terminal ends and terminal covers are provided.
    - A.1.4 Six-gauge duplex service wire and supply breaker to be provided.
  - A.2 Tarpaulin roller spool shall be minimum 3”, 6063 aluminum or 3” galvanized steel tube and shall be sealed from weather.
    - A.2.1 Roller tube shall have a groove for full width insertion and retention of the tarpaulin, by means of a nylon hem tube.
  - A.3 Tarpaulin roller spool shall pivot on heavy-duty nylon bushings.
    - A.3.1 Bushings shall pivot on a minimum ½ inch diameter, zinc plated steel roller stub shaft.
  - A.4 Tarpaulin roller spool shall be designed so that the tarp shall roll off the top or bottom of the spool.
  - A.5 The ends of the roller spool shall be supported by a minimum 3/16” thick gauge steel end plates.
    - A.5.1 Steel end plates shall be supplied with steel or aluminum weld on mounting brackets, which utilize bolts of sufficient strength to safely secure the enclosure to the vehicle bed.

- A.5.2 Steel end plates shall be painted with a manufacture's standard lead-free baked on powder coating black color.
- A.5.3 Steel end plates shall be connected with an aluminum spacer rod to support the roller assembly.
- B. SPRING PIVOT ASSEMBLY: Spring arm assemblies shall be suitable for tarp length from 10 feet to 40 feet and shall consist of the following:
  - B.1 Spring arm pivot to be manufactured out of heavy gauge steel and contain one spring per side.
    - B.1.1 Pivot assembly to be fully enclosed to protect the spring and designed to provide compact side mounting.
    - B.1.2 Springs shall be two-inch wide, spiral wound, each providing 600 ft lbs. of torque under tension.
    - B.1.3 Springs to be designed to provide 180 degrees of rotation and protected from over-tensioning by means of a polypropylene coil insert
    - B.1.4 Springs to be powdered coated red.
  - B.2 Arm sections are to be of heavy duty standard size galvanized steel or aluminum pipe that is easily replaceable.
    - B.2.1 Upper arm sections and pull bar to be made of common 1.66 diameter .083 wall, galvanized tubing for applications to 33 feet in length or 1 ¼" diameter schedule 40 aluminum pipe for applications to 40 feet in length.
    - B.2.2 Upper arm sections attach to Teardrop extruded pullbar by means of solid cast aluminum connecting elbows.
    - B.2.3 Lower arm sections are made of common 1.90 diameter .090 wall, galvanized tubing for applications to 33 feet in length or 1 ½" diameter schedule 40 aluminum pipe for applications to 40 feet in length.
  - B.3 Pullbar to be of Teardrop design.
    - B3.1 Teardrop pullbar to have a groove the full width of the bar to accommodate the hem tube of the tarp to slide into the bar. The design is to allow the tarp to be double wrapped to eliminate bunching and stress on the stitching.
    - B3.2 Urethane bumpers and hardware are provided to keep the tarp centered on the pullbar and reduce noise.

- C. TARPULIN FABRIC: Tarpaulin fabric shall consist of one of the following:
  - C.1. Asphalt tarpaulin fabric shall be 14-ounce nylon vinyl fabric coated on both sides (A-2) with urethane. Tarpaulin fabric shall be impermeable to water or moisture, and shall be resistant to mildew and ultra violet light. Tarpaulin fabric shall withstand normal handling and placement at temperatures from -35 degrees Fahrenheit to 400 degrees Fahrenheit without endangering the structural integrity and serviceability of the fabric.
  - C.2. 18-ounce vinyl coated nylon fabric. Tarpaulin fabric shall be impermeable to water or moisture, and shall be resistant to mildew and ultra violet light. Tarpaulin fabric shall withstand normal handling and placement at temperatures from -35 degrees Fahrenheit to 375 degrees Fahrenheit without endangering the structural integrity and serviceability
  - C.3. Heavy duty open weave black or red PVC coated polyester mesh..
- D. TARPULIN CONSTRUCTION: Double-lock stitching.
- E. SIDE FLAPS: Ground operated integrated system.
  - E.1 Side flaps to be integral part of tarp and retract fully into the housing enclosure. Side flaps to be secured by flap rope passing through large #4 brass grommets attached to the edge of the flap. Side flaps to extend a minimum of 17" from edge of tarp.
- F. WARRANTY:
  - F.1 The Pulltarps Open Arm System carries a one year guarantee on all moving parts, and a lifetime guarantee on the UHMW bushings.
  - F.2 Electric motor carries a three-year manufacturer's prorated warranty.
